REMARKS

This is UNEVALUATED Information

25X1

1. The airfield southeast of Titograd (Y 46/N 06) seemed to be an old installation. No hangars were seen, but a large brick building was on the western edge of the field. A radio installation of two trellis masts was on the southern edge of the field. The masts were about 20 meters apart.

2. About two or three single-engine low-wing monoplanes were occasionally seen being refueled on the eastern edge of the field. Only a few flights were made. One twin-engine low-wing monoplane daily landed at the field at about 11 a.m.

3. Soldiers wearing blue uniforms were seen in the area of the field. *

* [redacted] Comment. The report of a more recent date contains no new information as compared with previous data. [redacted] 25X1
The status and flying activity of the field had not changed by Mar 1950. Only slight military flying activity, possibly basic training or only flying with courier planes, is believed to be conducted at the field, which is used mainly by commercial planes. 25X1
